

BELPAY E-invoicing Service for Managing Supply Chain Finance

BELPAY introduces an advanced service for small and medium size enterprises

With the recent endorsement of a common ISO standard by the EU, e-invoicing across Europe is moving mainstream, currently growing at the phenomenal annual rate of 40%. It is well known that by sending, receiving and actively managing professionally looking online invoices, corporations and government organizations can simplify payment administration, support environment by eliminating paper, help to achieve painless audits and reduce overhead costs.

BELPAY presents corporations with a unique **shared e-invoicing/e-finance platform that ensures convenience of the integrated basic payment options and highly effective management of their working capital and order-to-cash chain**. Our value-added platform has been developed for the Belgian and EU-based Small and Medium size Enterprises (SMEs) actively engaged in the international trade.

For money strapped corporations, a deployment of *BELPAY's* *shared e-invoicing/e-finance platform* might result in the substantial improvements in the corporate bottom line. When dealing with a particular vendor or a client, e-financing can mean a big difference to your bottom line or can attract trading partners that otherwise would not deal with your corporation.

BELPAY's shared platform provides **substantial additional benefits** compared to the conventional e-invoicing services:

- *For a majority of internationally trading SMEs that do not yet use e-invoicing*, *BELPAY* provides a most advanced and fully featured online e-invoicing/e-finance platform. In addition to convenience of the integrated basic payment options and conducting effective management of its working capital, your company can save on invoice administration, as there is no need for purchasing, constant upgrading and maintaining an expensive in-house corporate IT system that deals with these critical functions.
- *The corporations that already use an e-invoicing system* can get substantial additional benefits with the *BELPAY's* supplemental e-financing service. It might be especially valuable when your company has to handle non-mainstream currencies (such as if it purchases from China or sells to Brazil); when there is a requirement for transactional financing (i.e., to finance trans-border account payables, or to conduct factoring of accounts receivable); when a vendor asks for a guaranty for a big batch of supplies; if tax agency requires legal validity during audits; or if a large client (like Tesco or Wal-Mart) insists on receiving only ISO standard e-invoices.

BELPAY offers comprehensive and cost-effective solutions to the commonly experienced administrative challenges in support of international trade. Our services support your company's corporate treasury and various functions related to payment services in international transactions. Through extensive technical and financial research, we are able to suggest to the small and medium size enterprises (SMEs) the latest and most advanced means of managing cross-border transactions that are usually available only to large multinationals.

BELPAY E-invoicing Service for Managing Supply Chain Finance

Top benefits to be considered by the CFOs and corporate treasurers

BELPAY's advanced e-invoicing/e-finance platform could help your company to drive up its profit margins when conducting cross border trade – by saving on invoice administration, integration of the basic payment options and through effective management of the working capital and order-to-cash chain. According to various industry sources, by sharing advanced e-invoicing with e-finance ***your company could save as much as 20% of its foreign accounts receivable and payable****.

- BELPAY's shared platform has been introduced in Belgium for a first time. Previously, such a comprehensive specialized service was only available to large multinationals.
- SMEs that are able to improve their invoice administration and payment, as well as the management of their order-to-cash chain have a strong competitive advantage over those that still have not rationalized their complex international trading operations.
- In addition to the convenience of the basic payment options integrated with e-invoicing, (i.e., debit, credit), *BELPAY's* e-finance platform supports effective management of your working capital, mitigating the uncertainty surrounding the timing and amount of payments. It sustains cash liquidity and stronger balance sheet position, thus strengthening buyer-supplier relationship.
- *BELPAY's* e-finance platform could provide your company with the tangible cash benefits – by using sophisticated cash flow forecasting and flexible payment tools like dynamic early payables discounting of the receivables, financing trans-border account payables and receivables by advancing cash to an exporter against invoices, extending payment terms with the injection of third party capital, tapping into an alternative source of working capital with the use of third party asset-based lenders, and factoring of accounts receivable.
- *BELPAY's* shared platform can be customized for client's individual needs. For example, if you import substantially from India, export occasionally to the United States, or require implementing regular payroll payments to your subsidiary in Moldavia, BELPAY can help you with optimizing various international trade payment support scenarios.
- If your company requires specialized help in organizing effective management of its order-to-cash chain, BELPAY will help you to identify required top support from around the globe. For each transaction, *BELPAY's* shared e-invoicing/e-finance platform can help your company with shopping among several potential lenders for the best financing rate and conditions.
- *BELPAY's* digitally signed e-invoices have full legal validity and thus can be guaranteed for many years if audited by the tax agency.
- No need to purchase, constantly upgrade and maintain an expensive in-house corporate IT system. For SME corporate treasuries, our new online platform is much easier to use than most proprietary e-invoicing systems.

*Note that exact results might vary depending on implementation. Please inquire.
