

## Banking Grade ICT System for the SMEs

### **BelPay introduces secure and powerful ICT System for SMEs**

Due to highly sensitive character of their internal data handling and storage, many organizations and financial institutions have a pressing need for higher levels of security and privacy. Conventional secure Information and Communications Technology (ICT) systems have mainly been developed for military and very large financial institutions. They are too complex to install and use, and too expensive for many Small and Medium size Enterprises (SMEs).

*BelPay* has introduced **Banking Grade ICT System for the SMEs**, especially tailored to the EU-based internationally trading corporations, small government departments and financial institutions. Developed in Canada, this original, scalable, highly powerful and reasonably priced ICT platform ensures high levels security and privacy of SME business applications, as well as their profitability and sustainability.

***For an average SME that might require high levels of security and privacy, BelPay's ICT platform has the potential to pay for itself in the first year and start saving after that.***

*BelPay* offers comprehensive and cost-effective solutions to the commonly experienced administrative challenges in support of international trade. Our services support your company's corporate treasury and various functions related to payment services in international transactions. Through extensive technical and financial research, we are able to suggest to the SMEs the latest and most advanced means of managing cross-border transactions that are usually available only to large multinationals.

### **Top benefits to be considered by the CIOs, CSOs and CFOs**

*BelPay* advanced ICT platform is based on the widely available and cost-effective 64-bit Windows operating system and Intel proprietary hardware:

- Supports banking grade security and privacy solutions at a fraction of the cost compared to the conventional banking technologies
- Required for ICT networks that run Private Key Infrastructure (PKI) applications
- Ensures full data separation, tight control and privacy of data records (*even from its own tech support and offshore help personnel!*), as well as the use of encryption, digital signatures, identity management and offsite backup/disaster recovery
- Transparent and secure Internet and mobile payments transactional support
- Full supports for cross-border Knowledge Process Outsourcing (KPO), Managed Service Providers (MSPs) that assure critical labor cost savings for SME clients
- Enables international teamwork collaboration with the use of Microsoft Office, Internet and Web forms, business rules and workflows
- Our customizable approach means that *BelPay Banking Grade ICT System for the SMEs* can be set up precisely for client's individual needs
